## What's New In ContactKeeper?

You have a hard drive filled with folders containing dozens of music tracks from various artists, including songs you heard at parties or mixtapes you've acquired from a store. What do you do with all of those MP3s? Right now, you have no idea. It's time to create a database of the music you own, so you can access, edit, and organize it easily. MP3 Database Manager: MP3 Database Manager is an application that is designed to help you manage your music files and create a database of your music. The program is very easy to use. You can add music files directly to the database and specify the date they were added to the database. You can rename the music file, set the tags for the music file, or change the song title, artist name, and genre. You can also specify the format of the music file: MP3, OGG Vorbis, WAV, FLAC, WMA, or AAC. Furthermore, you can set up a playlist, create a new folder, organize your music files, export the entire database to an HTML file format, copy songs from one folder to another, print the entire database or the selected music file to the printer, and even create a podcast of all the music in the database. Top-notch features: You will be able to do a lot of things with the music files in the database. The application has a clean, modern user interface. The program is packed with features, like: Database size limitation The MP3 Database Manager application can save up to 250 gigabytes of music in a database. If your music library is more than 250 gigabytes, the application won't be able to add all the music files to the database. Supported formats The program supports MP3, OGG Vorbis, WAV, FLAC, WMA, and AAC formats. What's more, you can add music files with a high quality in various file formats (including WAV, OGG Vorbis, FLAC, WMA, and AAC). Resolution of the problem with album art If you add music files with non-high quality audio formats, the album art will be converted to a PNG image. If you select music with a PNG file format, you'll be able to see the original album art. Smart Playlist creation You can use the MP3 Database Manager to create playlists of music files. You can also set the playlists to repeat or play randomly. Lists of music files You can create a list of music files, which is a great way to group them. The list can contain music files and podcasts. If you add music files to the list, they will be added to the list automatically. You can create a new list or modify an existing list. 1.
